

1. What is Python?
2. What are the main features of Python?
3. Why is Python called a high-level language?
4. Why is Python called an interpreted language?
5. Is Python compiled or interpreted?
6. What is CPython?
7. What is Python bytecode?
8. What is PVM?
9. What is the difference between Python and CPython?
10. What is dynamic typing?
11. What is type casting/type conversion in Python?
12. What is the difference between implicit and explicit type conversion?
13. What is PEP 8?
14. Why is indentation important in Python?
15. What is the difference between a variable and an object?
16. What are mutable and immutable data types?
17. What is the difference between shallow copy and deep copy?
18. What is the difference between `type()` and `isinstance()`?
19. What is the difference between a built-in function and a method?
20. What is `None` in Python?
21. What are operators in Python?
22. What are the different types of operators?
23. What is the difference between `==` and `is`?
24. What is the difference between `/` and `//`?
25. What are membership operators?
26. What are identity operators?
27. What is the difference between `and`, `or`, and `not`?
28. What is the difference between bitwise and logical operators?

29. What is operator precedence?
30. What is short-circuit evaluation?
31. What is the difference between if, elif, and else?
32. What is the difference between elif and match-case?
33. What is the difference between for and while?
34. When should we use a for loop and when should we use a while loop?
35. What is an infinite loop? How is it achieved and which loops can be used?
36. What is the difference between break, continue, and pass?
37. What are strings, lists, tuples, sets, and dictionaries?
38. Why are strings immutable?
39. What is indexing and slicing?
40. What is the difference between find() and index()?
41. What is the difference between split() and join()?
42. What is string formatting, and what are f-strings?
43. What is the difference between replace() and translate()?
44. Can a list contain different data types?
45. What is the difference between a list and a tuple?
46. What is the difference between append() and extend()?
47. What is the difference between insert() and append()?
48. What is the difference between remove() and pop()?
49. What is the difference between del and remove()?
50. What is the difference between sort() and sorted()?
51. What is the difference between reverse() and reversed()?
52. Why are tuples immutable?
53. What is tuple packing and tuple unpacking?
54. Is it possible to perform tuple comprehension? What happens if we try?
55. What is the difference between a set and a list?
56. What is the difference between discard() and remove() in sets?

57. What is the difference between `get()` and direct key access?
58. What are `keys()`, `values()`, and `items()`?
59. How do you iterate through a dictionary?
60. How do you add, update, and delete dictionary elements?
61. What is a function and why do we use functions?
62. What is the difference between defining and calling a function?
63. What is the difference between a parameter and an argument?
64. What is the difference between positional and keyword arguments?
65. What are default arguments?
66. What are `*args` and `**kwargs`?
67. What is the difference between `return` and `print()`?
68. What happens when a function does not have a return statement?
69. What is a lambda function and where is it used?
70. What is variable scope?
71. What is the difference between a local scope and a global scope?
72. What is the difference between a local variable and a global variable?
73. What is the difference between global and nonlocal keyword?
74. What is the LEGB rule?
75. What is list comprehension?
76. What are the advantages of list comprehension?
77. What is the difference between a normal loop and list comprehension?
78. What is the `enumerate()` function in Python?
79. What is the `zip()` function in Python?
80. What is the difference between `input()` and `print()`?
